

PROJECT DEVELOPMENT PHASE

SPRINT - 4

Date	07 November 2022
Team ID	PNT2022TMID24647
Project Name	AI based Discourse for Banking Industry

Build Python Code :

1: Importing Libraries

The first step is usually importing the libraries that will be needed in the program.

from flask import Flask, render_template

Importing the flask module into the project is mandatory. An object of the Flask class is our WSGI application. Flask constructor takes the name of the current module (`__name__`).

2. Creating our flask application and loading

app = Flask(__name__)

3. Routing to the html page

Here, the declared constructor is used to route to the HTML page created earlier.

@app.route('/')

def home():

return render_template('bot.html')

The `'/'` route is bound with the bot function. Hence, when the home page of a web server is opened in the browser, the HTML page will be rendered.

4. Main Function

This is used to run the application in localhost.

if __name__ == '__main__':

app.run()

Preview of the page
